

**AMENDMENTS TO THE SPECIFICATION**

Please amend paragraph [00115] on page 18 of the specification as follows:

[00115] As shown in Fig. 7c, the use of FS7 and FS8 does ~~does not~~ reveal same previous frame sync sequence before any frame, namely, the previous frame sync sequence before any frame is unique, therefore, there is no problem in detecting a linking area.

O.K. to be entered
